Figure 1 shows the best fit value and the allowed region 68 % (green) and 90 % C.L. (blue) for $\sin^2 2\theta_{13}$ for each value of δ_{CP} using this file.

`t2k_2012paper_ptheta_dl.root` contains the negative log likelihood distribution as a function of $\sin^2 2\theta_{13}$ for each value of δ_{CP} from -3.14 to 3.14 with 21 steps.

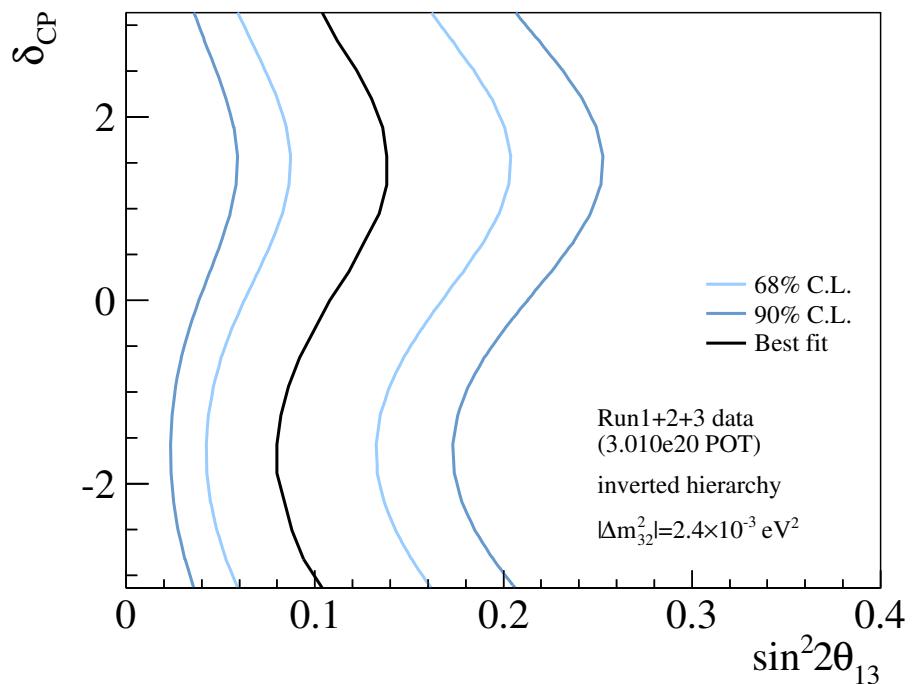

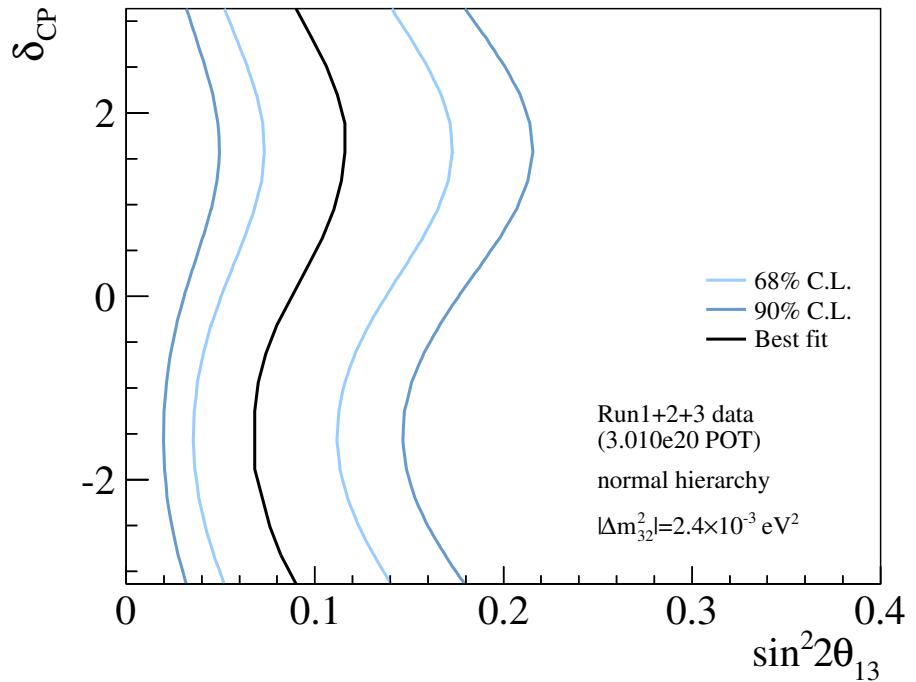

Figure 1: Allowed region of 68 % (green) and 90 % C.L. (blue) for $\sin^2 2\theta_{13}$ for each value of δ_{CP} . The black solid line is the best fit value for each value of δ_{CP} . Top (bottom) plot: normal (inverted) hierarchy is assumed.
